TSX-V: RRS

ROGUE RESOURCES RELEASES NI 43-101 TECHNICAL REPORT ON LAC DE LA GROSSE FEMELLE SILICA PROJECT

VANCOUVER, B.C. – Rogue Resources Inc. (TSX-V: RRS) (“Rogue” or the “Company”) is pleased to announce that the NI 43-101 Technical Report on the Lac de la Grosse Femelle property (the “Femelle Project”) located approximately 95 km northeast of Québec City has been approved by the TSX-V and is now posted on SEDAR and the Company website. The report was prepared by Geologica Inc. of Val-d’Or, Québec after conducting a site visit, sampling program and undertaking considerable research related to the area, historical exploration work, and Government research documents.

HIGHLIGHTS OF NI 43-101 TECHNICAL REPORT

1. Site Visit, Sample Collection, Assay Results

- a. Two quartzite occurrences (“D” and “G”) on strike with similar quartzite units presently being mined on the Sitec Property.
- b. “G” quartzite unit on property has 1.1 km observed strike length, “D” quartzite unit yet to be tested
- c. “G” quartzite unit known to reach up to 275m in depth
- d. Easily accessible by paved highway and gravel forestry roads
- e. Within 4 km of Mine Sitec, a fully operational silica mine in production for past 50 years
- f. 22 geochemical samples collected by Geologica, 15 were surface samples of white quartzites on the “G” quartzite unit
- g. Highest assay: 99.54% SiO₂, 0.28% Al₂O₃, 0.07% Fe₂O₃, and 0.02% TiO₂. Samples were analyzed by ALS Chemex in Vancouver, B.C. for whole rock and trace elements (ME-XRF and ME-XRF06)

SAMPLE	U83Z19-EAST	U83Z19-NORTH	SiO ₂ (%)	Al ₂ O ₃ (%)	Fe ₂ O ₃ (%)	TiO ₂ (%)

2. Two Phase Exploration Plan Outlined

a. Phase 1

- i. Airborne Mag, EM and Radiometric Surveys
- ii. Ground Geophysical Surveys
- iii. Prospecting, mapping and sampling
- iv. Outcrop stripping and trenching
- v. Bulk sample of 50 tonnes

b. Phase 2

- i. Diamond drilling (NQ size)
- ii. 5000m drill program

3. Recent Advancements on Project

- a. Airborne Heli-MAG survey flown over the quartzites of the Femelle Project on December 7, 2014, with preliminary maps and reports to follow. The survey consisted of 321 km of north-northwest oriented flight lines spaced at 100 m, in an effort to better define under-exposed quartzite on the project.
- b. The Company has initiated community consultations and presented its project to various local groups (MRC de Charlevoix, MRC de Charlevoix Est, MRNQ in La Malbaie, the Mairie de St.Urbain, and Zec des Martes). Rogue plans to continue working with the local community as it advances the project.

Going Forward

1. Comprehensive Phase I exploration plan for 2015 being prepared
2. Geo-compilation of the airborne Mag survey underway
3. Determining width, depth and strike length of the two northeast oriented quartzites a Company priority
4. Consultation with silica processing plants to start in Q1, 2015
5. Various permitting applications underway
6. Meeting with ministry officials to continue
7. Work on site to begin in Spring, 2015

About the Femelle Silica Project

The Femelle Property is underlain by quartzite sequences with multiple quartzite outcroppings. The quartzites have a high silica content with minimal impurities, generally less than 1%. Commonly referred to as high purity quartz, the silica produced from this type of quartzite is highly sought after.

It is located approximately 42 km north of Baie-Saint Paul, situated on the St. Lawrence River, and 4 km northeast of the Mine Sitec silica mine. The mine has been in operation for over fifty years and the property hosts 10 quartzites of high silica content horizons, (DPV682 Rondot 1979) with four (4) of the quartzites striking NE towards the Femelle Project, adjacent and contiguous to the NE corner of the Mine Sitec Deposit. Access to the project is via a paved highway and well maintained forestry access roads.

The Québec government recently announced a \$382 million investment in FerroAtlantica, one of the world's largest silicon metal producers, which is preparing to build a silicon metal plant at Port Cartier, Québec, located on the St Lawrence River approximately 400 kilometers southeast of the project. This plant is projected to come on stream in June, 2016.

Silica is used as a component for the production of:

- semi-conductors
- LCD displays
- fuse quartz tubing
- microelectronics
- solar silicon applications (solar panels)
- silicon-anode lithium batteries
- quartz kitchen counter tops
- silicon-metal
- ferro-silicon

Silicon Metal Market Outlook Report, published on March 28, 2014, reports that the resumption of stronger growth in demand has improved the prospects for the silicon market. "Recent price gains can mainly be attributed to tightening supply due to low current levels of production in Brazil and China, but increasing demand will sustain these gains and support a further rise in silicon prices through to 2017."

Qualified Person

The Lac de la Grosse Femelle exploration project is under the direct supervision of Eddy Canova, P Geo., and Senior Vice-President of the Company, a Qualified Persons ("QP") as defined by National Instrument 43-101, assisted by Alain-Jean Beaugard, P.Geo., and Daniel Gaudreault, Eng., Geo. of Geologica Inc., both independent QPs as defined by National Instrument 43-101. The Company's QP has approved the scientific and technical content of this release.

ON BEHALF OF THE BOARD OF DIRECTORS

John de Jong, CEO & President

Cautionary Note Regarding Forward Looking Statements: *Certain disclosures in this release constitute forward-looking statements, including timing of completion of exploration work. In making the forward-looking statements in this release, the Company has applied certain factors and assumptions that are based on the Company's current beliefs as well as assumptions made by and information currently available to the Company, including that the Company is able to obtain any government or other regulatory approvals, that the Company is able to procure personnel, equipment and supplies required for its exploration and development activities in sufficient quantities and on a timely basis and that actual results are consistent with management's expectations. Although the Company considers these assumptions to be reasonable based on information currently available to it, they may prove to be incorrect, and the forward-looking statements in this*

release are subject to numerous risks, uncertainties and other factors that may cause future results to differ materially from those expressed or implied in such forward-looking statements. Such risk factors include, among others, those matters identified in its continuous disclosure filings, including its most recently filed MD&A. Readers are cautioned not to place undue reliance on forward-looking statements. The Company does not intend, and expressly disclaims any intention or obligation to, update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except as required by law.
